

Phishing Awareness Training

- CodeAlpha Cyber Security Internship
- **Details**
- Name: Meet
- College: Government Engineering College Patan
- Branch: Computer Engineering
- Date:20/06/2026

image

- Hacker with email

- Cyber security shield

Today I will explain phishing attacks, their types, real-world examples, and how users can protect themselves from becoming victims.

- **What is Phishing?**

- **Definition:**

- Phishing is a cyber attack in which attackers pretend to be a trusted person or organization to steal sensitive information such as:

- 1.Username
- 2.Password
- 3.OTP
- 4.Bank details
- 5.Credit card information

Imagine you receive an email saying:

"Your bank account will be blocked. Click here immediately."

Many people panic and click the link. This is phishing.

Slide 3: How Phishing Works

Step 1

Attacker creates fake email or website

Step 2

Victim receives message

Step 3

Victim clicks malicious link

Step 4

Victim enters credentials

Step 5

Attacker steals information

Flow Diagram

Attacker

Fake Email

Victim

Fake Website

Credentials Stolen

What to Say

The attacker doesn't hack the computer first.

They trick the human first.

This is called **Social Engineering**.

Slide 4: Types of Phishing

Email Phishing

Fake emails

Smishing

Fake SMS messages

Vishing

Phone call scams

Spear Phishing

Targeted attack against a specific person

Whaling

Attack on company executives

Different phishing attacks use different communication channels.
But the goal is always stealing information.

Real Example of Phishing Email Content

Dear Customer,

Your SBI account has been suspended.

Click below to verify immediately.

www.sbi-secure-update.xyz

Thank You

SBI Team

Red Flags

- ✗ Urgent message
- ✗ Unknown domain
- ✗ Requests sensitive information

What to Say

A real SBI website uses:

sbi.co.in

Not:

sbi-secure-update.xyz

Always check the domain name.

Social Engineering Content

Social Engineering is the psychological manipulation of people to gain confidential information.

Examples:

- Pretending to be bank employee
- Pretending to be technical support
- Lottery scam
- Fake job offer

What to Say

Humans are often the weakest security link.
Attackers exploit trust, fear, and curiosity.

Warning Signs of Phishing Content

Look for:

- ⚠ Grammar mistakes
- ⚠ Suspicious links
- ⚠ Unknown sender
- ⚠ Urgent requests
- ⚠ Asking for OTP
- ⚠ Asking for passwords

What to Say

Banks never ask for:

- Password
- PIN
- OTP

through email or SMS.

How to Protect Yourself

Content

Best Practices

- ✓ Verify sender
- ✓ Check website URL
- ✓ Enable Two-Factor Authentication
- ✓ Use strong passwords
- ✓ Keep software updated
- ✓ Never share OTP
- ✓ Use antivirus software

What to Say

These simple habits can prevent most phishing attacks.

Quiz Section

Question 1

You receive an email asking for your OTP.

- A) Share OTP
- B) Do Not Share OTP

Answer: B

Question 2

The website URL looks suspicious.

- A) Continue
- B) Verify First

Answer: B

Question 3

Bank asks for password by email.

- A) Give Password
- B) Ignore and Report

Answer: B

What to Say

Interactive quizzes help users remember security concepts.

Conclusion

Content

Key Takeaways:

- Phishing is a common cyber attack.
- Attackers exploit human trust.
- Verify before clicking.
- Never share OTPs or passwords.
- Awareness is the best defense.

Thank You
